COVID-19 Protection Plan
Project Site – Anacortes Ship Harbor Roundabout
March 23, 2020

Site Specific: This open air, outdoor worksite is located at Ship Harbor Boulevard and SR20, in Anacortes, WA. It is by nature a Low Risk / Low Contact worksite with little to no direct physical contact with coworkers and/or the public. Education and Informational training as well as the steps shown below will be implemented on the project to all site employees. To meet the cleaning requirements below, a disinfectant solution will be onsite to clean surfaces as required.

How to Protect Yourself

Older adults and people who have severe underlying chronic medical conditions like heart or lung disease or diabetes seem to be at higher risk for developing more serious complications from COVID-19 illness. Please consult with your health care provider about additional steps you may be able to take to protect yourself.

Know how it Spreads

- There is currently no vaccine to prevent coronavirus disease 2019 (COVID-19).
- The best way to prevent illness is to avoid being exposed to this virus.
- The virus is thought to spread mainly from person-to-person.
  - Between people who are in close contact with one another (within about 6 feet).
  - Through respiratory droplets produced when an infected person coughs or sneezes.
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.

Take steps to protect yourself

Clean your hands often

- Wash your hands often with soap and water for at least 20 seconds especially after you have been in a public place or after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands and rub them together until they feel dry.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
Avoid close contact

- Avoid close contact with people who are sick
- Put distance between yourself and other people if COVID-19 is spreading in your community. The recommended distance is 6 feet. This is especially important for people who are at higher risk of getting very sick.

Take steps to protect others

Stay home if you're sick

- Stay home if you are sick, except to get medical care.

Cover coughs and sneezes

- Cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow.
- Throw used tissues in the trash.
- Immediately wash your hands with soap and water for at least 20 seconds. If soap and water are not readily available, clean your hands with a hand sanitizer that contains at least 60% alcohol.

Wear a face mask if you are sick

- If you are sick: You should wear a face mask when you are around other people (e.g., sharing a room or vehicle) and before you enter a healthcare provider's office. If you are not able to wear a face mask (for example, because it causes trouble breathing), then you should do your best to cover your coughs and sneezes, and people who are caring for you should wear a face mask if they enter your room.
- If you are NOT sick: You do not need to wear a face mask unless you are caring for someone who is sick (and they are not able to wear a face mask). Face masks may be in short supply and they should be saved for caregivers.

Clean and disinfect

- Clean AND disinfect frequently touched surfaces daily with household cleaners or EPA-registered disinfectants. This includes tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets, and sinks.
- If surfaces are dirty, clean them: Use detergent or soap and water prior to disinfection.
To disinfect:
Most common EPA-registered household disinfectants will work. Use disinfectants appropriate for the surface.

Options include:

How to dilute your household bleach

To make a bleach solution, mix:

- 5 tablespoons (1/3rd cup) bleach per gallon of water
  OR
- 4 teaspoons bleach per quart of water

Follow manufacturer’s instructions for application and proper ventilation. Check to ensure the product is not past its expiration date. Never mix household bleach with ammonia or any other cleanser. Unexpired household bleach will be effective against coronaviruses when properly diluted.

- Alcohol solutions
  Ensure solution has at least 70% alcohol.

- Other common EPA-registered household disinfectants
  Products with an EPA-approved icon are expected to be effective against COVID-19 based on data for harder to kill viruses. Follow the manufacturer’s instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).

The preceding information and much more about disinfectants and the COVID-19 Virus can be found on the CDC Website below:
